

# How Often is AIS Information Sent From the WatchMate Transponder?

## Class B transponder transmission rates

---

The WatchMate 850, WatchMate Vision, XB-6000, and XB-8000 are Class B devices, so it will send position reports every 30 seconds when the boat moves faster than 2 knots; otherwise, it drops back to every 3 minutes. Other information like the vessel's name, size, and type, sends every 6 minutes.
